HYGROW ORGANIC FERTILIZER – TECHNICAL SHEET

(Derived from 100% Plant-Based Organic Materials)

1. PRODUCT OVERVIEW

HYGROW Organic Fertilizer is a premium, plant-based organic input designed to enhance soil health, improve coffee yield, and promote sustainable farming. Formulated to provide balanced nutrition, it supports optimal growth conditions for coffee plantations while improving soil structure and microbial activity.

2. PRODUCT SPECIFICATIONS

Parameter	Specification
Nutrient Composition	Balanced NPK (3:3:3) with essential micro-nutrients (Ca, Mg, Zn, Fe, B)
Organic Matter	≥ 70% (≥ 30% Biochar + Compost)
pH Range	6.5 - 7.5 (Neutral)
Moisture Content	≤ 20%
C:N Ratio	≤ 20:1
Pathogen-Free	Yes, complies with organic standards
Formulation	Granular

3. BENEFITS FOR COFFEE FARMERS

A. SOIL HEALTH & FERTILITY

- **Enriches soil with organic matter** – Enhances microbial biodiversity, improving soil aeration and water retention.
- **Improves soil structure** – Reduces compaction, allowing better root penetration and nutrient absorption.
- **Increases cation exchange capacity (CEC)** – Enhances nutrient-holding ability for prolonged plant uptake.

B. PLANT GROWTH & PRODUCTIVITY

- **Slow-release, balanced nutrition** – Ensures a steady supply of essential nutrients throughout the growth cycle.
 - **Enhances root development** – Promotes deeper rooting for improved moisture and nutrient uptake.
 - **Supports uniform Coffee bean development** – Increases the percentage of high-grade coffee cherries.
-

C. PEST & DISEASE RESISTANCE

- **Strengthens plant immunity** – Contains bioactive compounds that improve disease resistance.
 - **Reduces nematode activity** – Organic compounds suppress harmful soil-borne pests naturally.
 - **Improves plant vigor** – Helps coffee plants withstand environmental stresses such as drought and excessive rainfall.
-

D. ENVIRONMENTAL SUSTAINABILITY

- **100% organic and biodegradable** – Leaves no chemical residues in soil or water sources.
 - **Enhances carbon sequestration** – Contributes to climate-smart agriculture and regenerative farming.
 - **Supports organic certification compliance** – Aligns with sustainable coffee farming standards like Rainforest Alliance, Fairtrade, and Organic Certification.
-

4. APPLICATION GUIDELINES FOR COFFEE PLANTATIONS

Growth Stage	Application Rate (kg/Tree)	Application Frequency
Nursery Stage	1.0 kg per seedling	Once per planting hole mixed with manure and top soil at transplanting
Early Vegetative Stage (1-2 years)	0.3 - 0.5 kg around the drip line	Twice per year (start of rains)
Mature Coffee Trees	0.3 – 1.0 kg around the drip line	Twice per year (vary with level production and/or potential)

Application Method:

- Apply in a ring around the tree on moist soil or when rain / irrigation is expected.
- Mix with topsoil and water immediately to activate microbial activity. Especially at planting

5. COMPARATIVE ADVANTAGE OVER SYNTHETIC FERTILIZERS

Attribute	HYGROW Organic Fertilizer	Synthetic Fertilizers
Soil Health	Improves microbial activity, organic matter, and water retention	Depletes organic matter, leading to soil degradation
Nutrient Release	Slow-release, sustained over time	Rapid, short-lived
Environmental Impact	Eco-friendly, carbon-negative	Risk of soil and water pollution
Long-Term Productivity	Enhances soil fertility for continuous production	Can lead to soil acidification and dependence
Resistance to Pests & Disease	Strengthens plant immunity naturally	No resistance benefits

6. PROJECTS WITH HYGROW

Projects that have used Hygrow Organic Fertilizer as the principle input on their sustainable regenerative coffee farming:

Organization	Project	Reference Contact
Solidaridad	Trace Project – Improvement of coffee productivity among coffee cooperatives in Kericho, Nandi, Bungoma and other West-of-Rift counties.	Jannifer Chemistor 0725494 845
Coffee Management Services (CMS)	Mt. Kenya Sustainable landscape and livelihood program.	Maureen Ndarathi 0725165695 maureen.ndarathi@coffeemanagement.com
Sustainable Management Services (SMS)	Improving coffee farmer resilience through Integration of Regenerative agricultural practices	Peter Ndambiri 0723863023 pndambiri@ecomtrading.com
Kenyacof / Sucafina	Nestle's Net Zero Program – Enhancing farmer productivity, soil health, water management and biodiversity - Kenya National program.	Muhia Murigi 0710261246 muhia.murigi@sucafina.com

7. CERTIFICATIONS & COMPLIANCE

Hygrow Organic Fertilizer is certified by: ECOCERT (EU, JAS, USDA NOP) and East African Organic Products Standard (KilimoHai).

HYGROW Organic Fertilizer is produced following strict quality control measures and complies with:

- ✓ KEBS Organic Fertilizer Standards (Kenya Bureau of Standards)
 - ✓ IFOAM Organic Farming Guidelines
 - ✓ Fairtrade & Rainforest Alliance Certification Requirements
-

8. TESTIMONIALS FROM HIGH-PROFILE COFFEE FARMERS

"Since using HYGROW Organic Fertilizer, my coffee trees have shown remarkable improvement in both yield and quality. The soil feels healthier, and the cherries are uniform in size with a rich aroma. It's a game-changer for sustainable coffee farming!"

— **John Mwangi, Award-Winning Coffee Farmer, Nyeri County**

"HYGROW has reduced my need for synthetic fertilizers while improving the overall productivity of my coffee plantation. The slow-release nutrients mean I don't have to apply frequently, making it cost-effective."

— **James Karanja, Medium-Scale Coffee Producer, Kiambu County**

9. CONCLUSION: WHY CHOOSE HYGROW?

- ✓ Scientifically formulated for high-value coffee farming
 - ✓ Boosts yield, cup quality, and soil fertility sustainably
 - ✓ Reduces input costs while enhancing long-term productivity
 - ✓ Supports certification for organic and sustainable coffee markets
-
